

<b>Chemical Reactions</b> Performance Assessment Evaluation
--

Student:
----------

5 = maximum performance
-------------------------

1 = minimal performance
-------------------------

<b>Student designed an experiment that produced as large a volume of CO<sub>2</sub> gas as possible using as small a mass of sodium bicarbonate as possible, but that was greater than the data provided.</b>	1	2	3	4	5
---	---	---	---	---	---

- |  |
|--|
| <input type="checkbox"/> Student described the procedure in detail.<br><input type="checkbox"/> Student was able to predict if the procedure will attain the goal. |
|--|

<b>Student gave reasons for choosing the conditions of their experiment.</b>	1	2	3	4	5
--	---	---	---	---	---

- |  |
|--|
| <input type="checkbox"/> Student correctly analyzed requirements of procedure.<br><input type="checkbox"/> Student included all experimental requirements.<br><input type="checkbox"/> Student clearly understood the requirements of procedure. |
|--|

<b>Student tested and presented the results of their experiment.</b>	1	2	3	4	5
--	---	---	---	---	---

- |   |
|---|
| <input type="checkbox"/> Student presented data in a clear and understandable manner.<br><input type="checkbox"/> Student included a graph of their data. |
|---|

<b>Student explained whether and why the volume of carbon dioxide produced was more than the sample data provided.</b>	1	2	3	4	5
--	---	---	---	---	---

- |   |
|---|
| <input type="checkbox"/> Student correctly calculated the volume of CO <sub>2</sub> produced.<br><input type="checkbox"/> Student was able to explain why the volumes are comparable. |
|---|

<b>Student made recommendations regarding the volume of vinegar and the mass of bicarbonate to be used.</b>	1	2	3	4	5
---	---	---	---	---	---

- |   |
|---|
| <input type="checkbox"/> Student accounted for the limits on reactant amounts.<br><input type="checkbox"/> Student maximized CO <sub>2</sub> produced while limiting reactants. |
|---|

**Student justified their recommendations based on cost.**

1 2 3 4 5

- Student was able to relate the limits placed on reactants to the amount of products produced.
- Student considered other possible procedures and predicts the outcome relative to the experimental data.
